       Title
.e.h. 58.8072 TARGET SUM
          Description
OTEMPET
            You are given a list of integers, and your task is to write a function that finds the two numbers in the list that add up to a specific target sum. You need to
            retum the indices of these two numbers.
            Write a function that takes a list of Integers and a target sum as input and returns a list of two indices (0-based) of the numbers that add up to the target
            sum. Assume that there is exactly one solution, and you cannot use the same element twice
            Sample Input:
            271115
            9
            Sample Output:
            [0, 1]
                                                                                      MAR och
                                                                                                                       B. B. O. C. M.
